

Business Sales Performance — Key Insights

Maincrafts Technology | Business Analytics (Excel + Power BI) Internship — Task 1

Period: Jan – Dec 2024
900 cleaned order records

Key Insights

- Electronics drives revenue, not margin.**
Electronics contributes Rs 2.93 Cr (~50% of total revenue) but carries the lowest category margin at 12.9%, well below the 15.6% average.
- Stationery and Clothing are high-margin but low-volume.**
Stationery holds the best margin (30.6%) and Clothing the second-best (24.9%), yet together they contribute under 4% of revenue.
- North leads, South lags.**
North is the top region at Rs 132.7 L; South trails at Rs 94.0 L, a gap of roughly 29% between the best and weakest region.
- Q4 momentum did not carry into December.**
Revenue peaked in October (Rs 62.1 L) but fell in November and December (-6.5% month-on-month), suggesting a post-festive slowdown.

Business Recommendations

- Protect Electronics margin.**
Renegotiate supplier costs or bundle accessories with Laptops/Tablets to lift Electronics margin closer to the company average.
- Grow high-margin categories.**
Increase marketing spend and shelf/online visibility for Stationery and Clothing to convert their strong margins into more volume.
- Investigate the South region.**
Run a regional review (pricing, product mix, local competition) to close the gap with North; consider a targeted regional promotion.
- Build a post-October retention offer.**
Introduce a November-December campaign (bundles, loyalty discounts) to counter the seasonal dip seen after October.

Bottom line

Revenue is healthy and North-led, but profitability is concentrated in low-volume categories. Rebalancing focus toward margin (Electronics costs, South region, high-margin categories) matters more right now than chasing more top-line growth.
